DETAILED ACTION

This office action is responsive to amendment filed on 11/25/07.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 55~66, drawn to a method of using a replicating device to transfer information between a master and a 3rd party device, classified in class 709, subclass 219.
- II. Claims 67~87, drawn to a vehicle diagnostic device, classified in class 701, subclass 29.

The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I replicate portions of information stored on a server to a dynamically allocated replicating device to facilitate in identifying and updating outmoded information from the server via the replicating device to the 3rd party device. Invention II is a vehicle diagnostic device storing the replicating device which provides replicated information containing instructions for configuring a vehicle application upon request by a wireless device. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must

include an election of the invention to be examined even though the requirement is to be traversed (37 CFR 1.143).

In accordance with 35 U.S.C. 133, a shortened statutory period of one month (not less than 30 day) is hereby set forth to reply to this Office Action. See also MPEP 710.02(b).
